Introduction

Item	Value	
Live	pay.esicia.rw	
Sandbox	pay.esicia.com	
Port	443	
Protocol	HTTPS	
Authentication	Basic authorization	
Administrator Page	TBA	

Authentication

API access is granted by the use of the Basic Authorization Header.

In your request, add the Authorization Basic HTTP header.

CURL EXAMPLE

curl --user name:password https://pay.esicia.com/

The system uses also IP whitelisting, the client need to submit a list of IPs where his application will be sending the request from.

Supported payment methods

For now the following payment methods are supported

- 1. MTN Mobile Money
- 2. Airtel Money
- 3. Visa Card
- 4. MasterCard
- 5. Spenn
- 6. SmartCash

Payment request

To send a payment request to a mobile number or other payment method:

POST data are sent as ison

Parameter	Severity	Type	Description	
			Description	
action	Required	string	pay; checkstatus	
msisdn	Required	string	The mobile phone number starting with country code and no +	
	-	_	sign. Also referred to sometimes as MSISDN.	
email	Required	String	Email of the paying client	
details	Required	string	Details of the payment to do	
refid	Required	string	Payment reference from your system (unique)	
amount	Required	integer	The amount of the payment to do (in RWF)	
currency		String	Will be RWF if not set (supported are RWF and USD)	
cname	Required	string	The name of the person paying	
cnumber	Required	String	Customer number at the Payment processor Level	
pmethod	Required	string	The payment method (cc Credit Card, momo – mobile money	
			bank – for bank payment, spenn for SPENN, smartcash)	
retailerid	Required	String	The unique retailer ID	
returl	Required	String	Return url for postback of the asynchronous response	
			(sometimes referred as webhook)	
redirecturl	Required	String	Redirection url after payment	
bankid	Required	String	The id of the Financial Institution used in payment (refer to	
			table bank codes)	
logourl	Optional	String	url to the logo image to be used on card checkout page	

In case of a successful payment request (awaiting to be paid) a retcode = 0 is returned.

Request body

```
{"msisdn":"0783300000","details":"order","refid":"15947234071471114","amount":4200,"currency":"RWF","email":"user@user.rw","cname":"CUSTOMER
NAME","cnumber":"123456789","pmethod":"momo","retailerid":"02","returl":"https://iduka.rw/api/paymentack","redirecturl":"https://www.iduka.rw","bankid":"130"}
```

Response

- Data
- Description

```
{"reply":"PENDING","url":"https://pay.esicia.com/checkout/A12343983489","succ
ess":1,"authkey":"m43snbf9oivnmersqh6mn1lbh5","tid":"E6974831594723691","refi
d":"15947234071471114","retcode":0}
```

Some payments are automatically processed, in that case the system will immediately send a response of success

Response

```
{"tid":"E6974821594723662", "refid":"15947234071471114", "momtransactionid":"2785640192", "statusdesc":"SUCCESSFUL", "statusid":"01", "retcode":0}
```

Additional parameters can be added based on method of payment (such as masked card, etc)

Errors

If something terrible were to happen. We will send back a neat array of error codes and descriptions.

Test cards

If something terrible were to happen. We will send back a neat array of error codes and descriptions.

Response

```
{"reply":"TARGET_AUTHORIZATION_ERROR","url":"
","success":0,"authkey":"rttdr2vr1hrdho853nfuvdkq01","tid":"E6974691594723427
","refid":"15947234071471114","retcode":606}
```

Post back asynchronous

In order to get the payment confirmation, our API sends the reply in an asynchronous mode. The client needs to have setup a listener to which we will be posting responses as we get payments information.

Successful payment case of mobile money

Success payment

```
{
"tid":"A441489693051",
"refid":"1489693046",
"momtransactionid":"616730887",
"payaccount":"0783300000",
"statusid":"01",
"statusdesc":"Successfully processed transaction."
```

Description Parameter Type tid string | K-Pay internal payment reference number refid string Payment reference from your system (unique) momtransactionid String Transaction ID from the concerned financial institution o1: successful; o2: Failed statusid string statusdesc String Details of transaction status payaccount String | Bank account / mobile number used to pay

Failed payment

```
{
"tid":"A2431476355795",
"refid":"1476293424",
"momtransactionid":"",
"statusid":"682",
"statusdesc":"An internal error caused the operation to fail"
}
```

Response expected

```
{
"tid":"A441489693051",
"refid":"1489693046",
"reply":"OK"
}
```

Note that statusid 01 is a complete transaction while any other value is the error code from mobile money.

Successful payment case of visa / mastercard

In case of Visa / mastercard payments, the client is redirected to the redirect url with the response sent to return url – your application has to read status of transaction in redirect url

Check transaction status

The client can at any time check the status of a transaction by using either internal reference and / or external refid.

request

user can send either TID or refid; action is mandatory and always has value checkstatus

```
{
"tid":"A441489693051",
"refid":"1489693046",
"action":"checkstatus",
}
```

Response

Is same as data in postback

```
{
"tid":"A2431476355795",
"refid":"1476293424",
"momtransactionid":"",
"statusid":"02",
"statusdesc":"An internal error caused the operation to fail"
}
```

Transaction not found

```
{"tid":"",
"refid":"",
"momtransactionid":"",
"statusid":"611",
"statusdesc":"Transaction not found"
```

We always recommend to rely on check status rather than post back data

KPay error / return code

Codes that represent message status retcode (payment request) and statusid (postback).

Id	Description
0	No error. Transaction being processed
01	Successful payment
02	Payment failed
03	Pending transaction
401	Missing authentication header
500	Non HTTPS request
600	Invalid username / password combination
601	Invalid remote user
602	Location / IP not whitelisted
603	Empty parameter missing required parameters
604	Unknown retailer
605	Retailer not enabled
606	Error processing
607	Failed mobile money transaction
608	Used ref id – error uniqueness
609	Unknown Payment method
610	Unknown or not enabled Financial institution
611	Transaction not found
